

Test Summary Report

Instagram

Project Name: Instagram – Core Features

Test Report ID: TR_INSTAGRAM_001

Prepared By: Hansika Samaranayake

Date: 21-Apr-2025

1. Test Summary

This report summarizes the results of the functional and UI testing conducted on Instagram’s core features such as login, messaging, posting, and notifications. Testing was performed manually across Android, iOS and Web platforms using valid and invalid data inputs.

2. Test Objectives

To validate that the Instagram application meets the expected functional and user interface requirements and ensure that core features perform as expected across supported devices.

3. Test Environment

- Devices: iPhone 14 (iOS 17), Samsung Galaxy S21 (Android 13), Chrome Web
- Network: Wi-Fi and 4G
- Accounts: Multiple test user accounts with valid and invalid credentials

4. Test Results Summary

Status	Count
Passed	9
Failed	1
Blocked	0
Total Executed	10

5. Defect Summary

- Total bugs logged: 1
- Critical: 0
- High: 1 (Validation bug on login screen)
- Medium: 0
- Low: 0

6. Conclusion & Recommendation

The core functionalities of Instagram passed most test cases. One high-priority bug related to login validation was found. It is recommended to fix this before release. No blockers were identified.
